The image shows a contemporary interior space. The background wall is composed of dark brown, vertically-oriented wood slats arranged in a staggered, grid-like pattern. A large, spherical pendant light hangs from the ceiling, made of a complex, interconnected wireframe structure that glows with a warm, golden light. In the foreground, a low, rectangular cabinet with a smooth, light grey finish and three doors sits on a light-colored, textured rug. The cabinet has thin, dark, angled legs. The overall aesthetic is modern and minimalist.

interior design products

Mikodam

We are trying to create an effective design process by understanding the needs of designers, architects and interior designers and by getting their opinions about the subject. Our desire is to be open-minded, to pay attention to people and to keep learning continuously.

Identifying acoustical needs and providing proper solutions accordingly affects the quality of sound and life in living spaces. Geta offers texture and material alternatives which can be combined with each other. Feel free to pick your choice of wood, lacquer or fabric when designing interiors.

Pursuing new ideas, creative Geta offers a modern and unique wall cladding solution which will bring a brand new inspiration to interiors, presenting opportunities to those who love to experiment with new materials, colors and techniques. Its three-dimensional design will add a totally different texture and depth to living spaces.

gota

Geta offers many color and material alternatives which you can combine as you wish, thus creating a unique design platform. Geta panels are designed to be repeated vertically or horizontally as much as required while being combinable in different colors.

bisa

In interior designs where the identities of consumer, manager, artist, architect and engineer collaborate, Bisa not only performs a function, it also undertakes to narrate a legend of all times. Together with its complementary parts with or without lighting, it offers solutions to help you create your own world. In addition to the application of form and material in the product, the combinations created by the experimentation of light and color add evocative layers and meanings to living spaces.

These panels have 3 types: Flat panels, flat panels with lighting and panels with box shelves. The height of the panel is 2400 mm and the total height is planned as 2500 mm together with the 100 mm baseboard. The 100 mm or 250 mm baseboards can be shortened if necessary and can be used on the top or bottom of the panels to complete the assembly on walls of different heights. These panels can be assembled side-by-side, one on top of the other or upside-down.

Various combinations can be created with different color and material options. In addition, perforated surfaces with 2 alternative diameters that have sound absorption characteristics are also available. Oak, walnut, teak, lacquer, fabric and their combinations are the current standard material choices.

fila

It has qualities that create new awareness and challenge existing acceptance and criticism. With every project, the ideas, solutions and contributions of interior designers enrich our design philosophy, making it more open to cooperation.

haza

The feeling of freedom and flexibility felt by each person is integrated with the attitude and approach of the space and the products it wears. Haza offers a modern and unique wall cladding solution which will bring a brand new inspiration to interiors.

kara

Forming a platform open to many thoughts and impressions, Kara is a modern and unique wall cladding solution which will bring a brand new inspiration to interiors. With its concept that can easily be adapted to many projects and spaces as well as its easy installation and dismantling, it is a wall covering solution that you can combine as you wish.

The height of the panel is 2400 mm and the total height is planned as 2500 mm together with the 100 mm baseboard. 100 mm or 250 mm baseboards can be shortened if necessary and can be used on the top or bottom of the panels to complete the assembly on walls of different heights. Because the panels overlap each other, the assembly is invisible.

kosa

In spaces shaped by color, pattern and texture, Kosa offers flexible interior solutions by delivering the best possible feelings.

The height of the panel is 2000 mm and the total height is planned as 2500 mm together with the 250 mm baseboard and 250 mm crown molding. Shorter panels are also available. These panels can be installed side-by-side using an 80 mm wide column and 600 mm, 900 mm or 1200mm wide panels with molding, crown molding and skirting.

sapa

Sapa creates inspiring, pleasant, comforting and energizing spaces and with its three-dimensional design, will add a warm texture and depth to your interiors.
